AQUAKLOR

The Ultimate Sanitation Solution

Disinfection,Sanitation & Odour Elimination in One Easy Operation

AQUAKLOR

The Ultimate Sanitation Solution

With handy valve control.
Kit comes with wall mount bracket and GHT hose thread quick connect

AQUAKLOR is the ultimate sanitation solution. Just attach the AQUAKLOR Sprayer to any garden hose end, point, and spray the area targeted for sanitizing. Your job is completed and concerns are washed away without any additional rinsing!

AQUAKLOR FACTS

Hypochlorous acid, which is contained in chlorine, is the most effective and affordable sanitizer available anywhere, and is the key sanitizing agent used in AQUAKLOR. Hypochlorous acid is highly effective against most dangerous pathogens, including bacteria, viruses, fungi, and protozoa, none of which become resistant to the incredibly effective hypochlorous acid. Liquid bleach solutions, however, the product used universally to sanitize contains little to NO hypochlorous acid, making it 80 to 120 times less effective than AQUAKLOR! Until the patented invention of AQUAKLOR, users of chlorine products faced two challenges: (1) gaining an understanding of its chemistry; and (2) finding a practical and safe delivery system. AQUAKLOR answers these challenges for its user by both simplifying the chemistry and providing a practical and safe delivery system.

Kills bacteria • Kills viruses • Controls mold • Controls algae • Aids in hygienic cleaning • DIN Registered # 02419947 • One-step sanitation for equipment and facilities • No batch mixing • No rinsing necessary • Environmentally friendly • Saves time and money

Excellent for general disinfection, deodorizing and sanitation of hard surfaces such as floors, walls, rubber apparel, waste receptacles, toilets, showers, tile and grout, swimming pool deck areas, change rooms and equipment, gym equipment, washrooms, garbage packers and trucks, greenhouses, animal enclosures, crates and holding pens as well as fish, meat and food processing equipment and their environs.

Ideal for use in schools, institutions, public use facilities, veterinary hospitals, animal care, farming and greenhouse environments as well as food processing and meat packing plants. Use anywhere that cross-contamination is a concern.
